September 5/2012

Dear Ted;

We recently constructed a new energy efficient home and utilized Quik-Therm in the walls, ceiling and basement. We were impressed at how durable, fast and easy all Quik-Therm products were to install.

The 2" Quik-Therm Concrete Insulation was installed in the basement. Our contractor said it was a pleasure to work with; no itchy fibreglass, poly or sealants. He claimed he was able to install Quik-Therm in about half the time of fibreglass and wood studs and would relish the opportunity to work with it again.

Since the house is brand new, it's too early to know exactly how low our utility bills will be. However what we do know for sure is; the basement is warm, dry and extremely comfortable.

Sincerely,

Denis Keating
