My basement was freezing. I knew I needed to reinsulate, but I wasn't sure which product to install. I am extremely paranoid about mold and had past issues with high humidity and mold growth on my exterior framing. With the humidity issue solved I needed to start from scratch. I was intrigued by this new "all in one" quicktherm insulation. Not only would my basement be insulated, and I wouldn't have to worry about reframing all the exterior walls, the quicktherm CIS exterior wall studs are made of expanded foam and wouldn't mold like my previous wood frame. My basement was insulated in September 2013, and there is a noticeable temperature difference. I was previously unable to comfortably sit in the basement without a sweater and layers of blankets. Now it's just as warm, if not warmer than the upstairs space! I did not install the product myself, so I cannot comment on its ease, but the installers (Ryan & Murray) were very competent, friendly, and didn't hesitate to answer any questions I had about their product. I would recommend!

Thanks guys.

Tamara Ashlie
